

Assignment 1:

SkillPath Website Enhancement Assignment

Your task is to create a responsive multi-page React application using reusable components and React Router.

Files to Create

- Footer.jsx
- HeroSection.jsx
- FeatureCard.jsx
- TestimonialSection.jsx
- CTABanner.jsx
- LandingPage.jsx
- AboutPage.jsx
- ContactPage.jsx
- NotFoundPage.jsx

Requirements

Landing Page

Create a Landing Page by combining:

- HeroSection component
- FeatureCard component(s)
- TestimonialSection component
- CTABanner component
- Footer component

About Page

Create an About Page that introduces the application, its purpose, and key features. The page should use the common Navbar and Footer layout.

Contact Page

Create a Contact Us page containing a form with:

- Name
- Email
- Subject
- Message

The form must:

- Use controlled inputs with `useState`
- Validate that all fields are filled
- Prevent page reload using `e.preventDefault()`
- Display a success message after successful submission

Not Found Page

Create a custom 404 page that appears when users visit an invalid route. Include a message and a button/link to navigate back to the homepage.

Routing

Configure React Router with the following routes:

- `/` → `LandingPage`
- `/about` → `AboutPage`
- `/contact` → `ContactPage`
- `*` → `NotFoundPage`

Navigation

Update Navbar and Footer components to include navigation links for:

- Home
- About
- Contact

Concepts Covered

- React Components
- Component Reusability
- Props
- State Management with `useState`
- Controlled Forms
- Event Handling
- Conditional Rendering
- React Router
- Page Navigation
- Layout Composition
- Dynamic Rendering
